Overview

In this assignment, you will create class models for various objects using Object-Oriented Programming (OOP) principles. Each model should have appropriate getters similar to how the Cake model was created in the previous lesson.

Requirements

Students must create a class model for the following objects:

- Cake
- Book
- Toy

Each class should:

- Define appropriate properties representing the object's attributes.

- Ensure consistency with previous Cake class model.

Submission Instructions

- Create a pull request on your GitHub repository with the completed class models.
- Share the pull request link in the #pull_requests channel on Discord.
- Include a brief description of your implementation in the pull request.
